STATE OF MONTANA

DEPARTMENT OF ADMINISTRATION

DATA PROCESSING BUREAU
MITCHELL BUILDING, HELENA, MONTANA 59601

RECEIVED
MAR 21 1975
Game Mgmt Div.

March 19, 1975

Mr. Joseph Egan, Assistant Administrator
Game Division
Montana Department of Fish and Game
Helena, Montana 59601

Dear Joe:

This is in response to questions concerning the apparently low hunter participation rates during the years since the new Deer and Elk Harvest Survey system was implemented in 1971. My research into the matter reveals that there definitely has been a problem, which is traceable directly to the licensee population figures that were used to calculate the hunter and harvest estimates.

When this system was conceived, I assumed that practically all (95 percent or higher) of the deer and elk licensee data would be captured and available for sampling purposes by the middle of January, which was the annual target date for beginning the survey. Looking back, I have discovered that we have averaged only 88.5 percent of the total at this time (Table 1). Since these same figures were ultimately used in calculating hunter and harvest estimates, the magnitude of the bias has been approximately a negative 11.5 percent. This is an average figure for the four license categories composed of Res. Deer A, Res. Deer B, Res. Elk, and NR Big Game. Estimates involving Res. and NR Elk Permit licensees and NR $35/$36 Deer licensees have never been afflicted by this bias because all such licensees have always been available for sampling.

In order to at least partially set the record straight, I have recalculated the State and Region hunter and harvest estimates for each of the years 1971, 1972, and 1973 (Tables 2-25). The correction factors applied to each license category in each year are listed in Table 1 for the comparable periods and categories. These same figures may be used to recalculate individual district estimates if such a need arises.

This bias will be avoided in the future by using Department of Fish and Game license sales figures for each of Res. Deer A, Res. Deer B, Res. Elk, and NR Big Game in the calculation of hunter and harvest estimates. Although this may result in a slight loss of accuracy (normally less than 1 percent) due to the nature of the data, this is clearly preferable to the much more serious bias that we have been experiencing.

If you or any of your staff have further questions concerning this problem, or my proposed solution to it, please call me.

Sincerely,
Burwell
Burwell Gooch, Programmer III
Systems Development Bureau

Enclosures
